SECTION 1 - INTRODUCTION

1.01 INTRODUCTION

Road Network Division of the Department of Planning and Infrastructure is responsible for the provision of traffic statistics pertaining to roads managed by the Northern Territory Government

Territory Asset Management Services is responsible under contract to the Department of Planning and Infrastructure for data collection, analysis and the operational management of the Departments traffic data acquisition program.

This report was prepared by Territory Asset Management Services for Road Network Division and represents processed traffic data in the following formats:

Annual Traffic Count Data 1996 to 2005

Monthly Traffic Count Data January 2005 to December 2005

Vehicle Classification at Rural Primary Stations

1.02 OBJECTIVES OF THE TRAFFIC COUNTING PROGRAMME

Traffic data is a vital part of the information required in the planning, design and operation of the urban and rural road networks. The information is used by the Department of Planning and Infrastructure, other Northern Territory Government Departments, State Government Road Authorities, and Commercial organisations.

The aim of the Department's traffic count programme is:

- a) To monitor annual trends in traffic using vehicle classifications over various types of road.
- b) To determine the amount of travel throughout the Territory, including each of the administrative regions of the Territory.
- c) To demonstrate variations in traffic flow throughout the year.
- d) To provide traffic flow information on specific links in the road network for project evaluation.
- e) To provide a comprehensive database of traffic information.

1.03 THE UTILISATION OF TRAFFIC COUNT INFORMATION

The Department of Planning and Infrastructure utilises the traffic information for the following purposes:

1. Road financing and budgeting.
2. Classification of roads and road network planning.
3. Development of programmes for the construction and maintenance of roads.
4. Development of road design standards.
5. The measurement of the level of service provided by the road network.

SECTION 2 - SUMMARY

2.01 DATA COLLECTION

Data for the traffic count report has been collected from a variety of locations at urban and rural primary and coverage stations throughout the Northern Territory.

2.02 REPORTING OF COUNT STATION RESULTS

Primary count stations throughout the Northern Territory are reported in VEHICLES.

Rural Coverage count stations are reported in VEHICLES.

Urban Coverage count stations are reported in VEHICLES, with the exception of multi lane roads as detailed below;

- Up to two (2) lanes in the same direction – reported in VEHICLES
- More than two (2) lanes in the same direction – reported in DOUBLE AXLES.

2.03 COMPUTER ANALYSIS

Traffic data is analysed using the Road Information Management System (RIMS) and downloaded from Count Stations using “TRANSPAC” and “Metrocount” Proprietary Traffic Analysis Software.

2.04 VEHICLE CLASSIFICATION DATA

Vehicle type classifiers divide the vehicles into the nationally accepted AUSTROAD94 standard.

SECTION 3 - TRAFFIC COUNTS

3.01 INTRODUCTION

The urban and rural traffic counting programme is monitored by a network of traffic stations in the four major urban centres (Darwin, Katherine, Tennant Creek & Alice Springs), and in all rural areas throughout the Northern Territory. Figures 2 through 6 show the locations of urban count stations and Figures 7 through 15 show the locations of Rural count stations.

Urban station numbers are prefixed by UD (Urban Darwin Region), UK (Urban Katherine Region), UT (Urban Tennant Creek Region) and UA (Urban Alice Springs Region).

Rural station numbers are prefixed by RD (Rural Darwin Region), RK (Rural Katherine Region), RT (Rural Tennant Creek Region), RA (Rural Alice Springs Region), and RE (Rural East Arnhem Region).

The traffic counting stations are divided into the categories of PRIMARY, COVERAGE, and SPECIAL.

3.02 PRIMARY STATIONS

Primary traffic stations record traffic counts 24 hrs. per day, seven days a week. Urban primary counts are collected in 15 minute intervals, and Rural counts are collected at 60 minute intervals on a continuous basis for 12 months of the year.

Table 1.1 Contains Urban Primary station AADT summaries over a 10 year period.

Table 1.2 Contains Urban Primary station AADT summaries for 2005.

Table 2.1 Contains Rural Primary station AADT summaries over a 10 year period.

Table 2.2 Contains Rural Primary station AADT summaries for 2005.

In these tables the information is presented under the heading of Road Name, Station Location, Road Number, ADT Station, Direction, Units, Calculated AADT. in vehicles per day for the past 10 years.

3.03 COVERAGE STATIONS

In most cases Coverage Stations record data over short periods, usually between a fortnight and a month. Counts are collected in 15 minute intervals at Urban stations, and 60 minute intervals at Rural stations.

Their purpose is to provide traffic counting coverage for sections of roads between primary stations.

Table 3.1 Contains Urban Coverage station estimated AADT summaries over a 10 year period.

Table 3.2 Contains Urban Coverage station estimated AADT summaries for 2005.

Table 4.1 Contains Rural Coverage station estimated AADT summaries over a 10 year period.

Table 4.2 Contains Rural Coverage station estimated AADT summaries for 2005.

In these tables the information is presented under the heading of Road Name / Location, ADT Station, Related Primary Station, Direction, Unit, ADT and Month of Count and Estimated AADT.

The estimated AADT for rural coverage stations are calculated from the ADT, by multiplying the monthly ADT by the seasonal factor for that month, for the related primary station.

3.04 SPECIAL STATIONS

Special stations are usually once off surveys required to provide traffic information for a specific project.

3.05 TRAFFIC COUNT SITE LOCATIONS AND YEAR OF LAST RECORD

Primary, Coverage, and Special station locations, and year that site last provided data are detailed Tables 4A, 4B, and 4C.

Table 4A Coverage Count Stations.

Table 4B Primary Count Stations.

Table 4C Special Stations and Applications.

SECTION 4 - VEHICLE CLASSIFICATION ON RURAL ROADS

4.01 INTRODUCTION

Classifiers are devices which are placed for a period of 10 to 14 days at each Rural Primary Station to determine the composition of the traffic counted.

4.02 STATION CALIBRATION FACTOR

The Station Calibration Factor (SCF) is derived from the vehicle classification data and is the ratio of the number of vehicles counted by the classifier, divided by the number of double axles recorded at an adjacent counter.

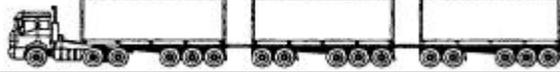

The SCF is used to calculate the number of VEHICLES from a DOUBLE AXLE count.

4.03 VEHICLE CATEGORIES

Vehicles are classified into the twelve AUSTROADS Vehicle Classification categories as shown in Chart 1

Table 5.1 contains the percentages of each class of vehicle counted and the Station Calibration Factor for Rural Primary stations, and Table 5.2 contains the percentages of each class of vehicle counted and the Station Calibration Factor for Rural Coverage stations.
