# 1. Introduction

## 1.1. Introduction

Transport and Civil Services is responsible for the provision of traffic statistics pertaining to roads managed by the Northern Territory Government.

Territory Asset Management Services Pty Ltd and Territory Traffic Surveys are responsible under contract for data collection, analysis and the operational management of the Department's traffic data acquisition program.

This report was prepared by Territory Traffic Surveys Pty Ltd for Transport and Civil Services and represents processed traffic data as follows:

Annual Traffic Count Data 2013 to 2024

Monthly Traffic Count Data January 2024 to December 2024

Vehicle Classification at Urban Primary Stations 2024

Vehicle Classification at Rural Primary Stations 2024

## 1.2. Objectives of the traffic counting programme

Traffic data is a vital part of the information required in the planning, design and operation of the urban and rural road networks. The information is used by Northern Territory Government departments, state government road authorities, and commercial organisations.

The aims of the Department's traffic count programme are to:

- monitor annual trends in traffic using vehicle classifications over various types of road
- determine the amount of travel throughout the Territory, including each of the administrative regions of the Territory
- demonstrate variations in traffic flow throughout the year
- provide traffic flow information on specific links in the road network for project evaluation
- provide a comprehensive database of traffic information.

## 1.3. The utilisation of traffic count information

The Department utilises the traffic information for the following purposes:

- road financing and budgeting
- classification of roads and road network planning
- development of programmes for the construction and maintenance of roads
- development of road design standards
- measurement of the level of service provided by the road network.

## 2. Summary

### 2.1. Data collection

Data for the traffic count report has been collected from a variety of locations at urban and rural primary and coverage stations throughout the Northern Territory.

### 2.2. Reporting of count station results

Primary count stations throughout the Northern Territory are reported in VEHICLES.

Rural Coverage count stations are reported in VEHICLES.

Urban Coverage count stations are reported in VEHICLES, with the exception of multilane roads as detailed below:

- Aust Road Coverage sites – reported in VEHICLES
- More than one (1) lane in the same direction – reported in DOUBLE AXLES.

### 2.3. Computer analysis

Traffic data is analysed using a variety of software applications as follows:

- TAMS Traffic Reporting System (TAMS TR)
- Proprietary traffic counting software from vendors of MTE data collection devices
- Road Information Management System (RIMS).

Traffic data is downloaded from count stations using “Metrocount” Proprietary Traffic Analysis Software.

### 2.4. Vehicle classification data

Vehicle type classifiers divide the vehicles into the nationally accepted AUSTROADS94 and 4 BIN Vehicle Classification Systems. Refer to chart 1 & 2 in this document for a description of vehicle classifications.

## 3. Traffic counts

### 3.1. Introduction

The urban and rural traffic counting programme is monitored by a network of traffic stations in the four major urban centres (Darwin, Katherine, Tennant Creek & Alice Springs), and in all rural areas throughout the Northern Territory.

Refer to the maps in this document for count station locations.

The maps are shown as: Figures 2 - 6 Urban count stations and Figures 7 - 15 Rural count stations

Urban station numbers are prefixed by UD (Urban Darwin Region), UK (Urban Katherine Region), UT (Urban Tennant Creek Region) and UA (Urban Alice Springs Region).

Rural station numbers are prefixed by RD (Rural Darwin Region), RK (Rural Katherine Region), RT (Rural Tennant Creek Region), RA (Rural Alice Springs Region), and RE (Rural East Arnhem Region).

The traffic counting stations are divided into the categories of PRIMARY, COVERAGE and SPECIAL.

### 3.2. Primary stations

Primary stations collect either count or classification traffic data on a permanent basis. Urban and rural primary counts are collected in 15 minute intervals.

Primary stations data is under the following tables:

- Table 1.1 Urban Primary station AADT summaries over a 10 year period
- Table 1.2 Urban Primary station AADT summaries for 2024
- Table 2.1 Rural Primary station AADT summaries over a 10 year period
- Table 2.2 Rural Primary station AADT summaries for 2024
- Table 5.1 Rural Primary station Vehicle Classification for 2024
- Table 6.1 Urban Primary station Vehicle Classification for 2024
- Table 7.1 Primary Bike station AADT and Monthly ADT for 2024
- Table 7.2 Primary Bike station AADT summaries for 2024
- Table 7.3 Urban Bike station Vehicle Classification for 2024
- Table 8.1 Rest stop Area AADT summaries over 10 years
- Table 8.2 Rest Stop Area MADT Summaries for 2024

### 3.3. Coverage stations

Coverage stations record data over short periods with a minimum requirement of 28 days. Counts are collected in 15 minute intervals for both urban and rural stations.

The tables below provide traffic counting coverage for sections of roads between primary stations:

- Table 3.1 Contains Urban Coverage station estimated AADT summaries over a 10 year period
- Table 3.2 Contains Urban Coverage station estimated AADT summaries for 2024
- Table 4.1 Contains Rural Coverage station estimated AADT summaries over a 10 year period
- Table 4.2 Contains Rural Coverage station estimated AADT summaries for 2024
- Table 5.2 Percentages of each class of vehicle counted and the Station Calibration Factor for Rural Coverage stations for 2024
- Table 6.2 Percentages of each class of vehicle counted and the Station Calibration Factor for Urban Coverage stations for 2024

The estimated AADT for rural coverage stations are calculated by applying a seasonal factor to recorded data from the site. The seasonal factor is determined from a related primary site where year round data is recorded.

### 3.4. Special stations

Special stations are one-off surveys required to provide traffic information for a specific project.

### 3.5. Traffic count site locations and year of last record

Tables 4A, B and C indicate when data was last collected at each station as follows:

- Table 4A Coverage Count Stations
- Table 4B Primary Count Stations
- Table 4C Special Stations and Applications 2024
- Table 4D Road Closures and Restrictions 2024

## 4. Vehicle classification on rural roads

### 4.1. Introduction

Classifiers are devices which are placed for a minimum period of 28 days at each Rural Primary Station to determine the composition of the traffic counted.

### 4.2. Station calibration factor

The station calibration factor (SCF) is derived from the vehicle classification data and is the ratio of the number of vehicles counted by the classifier, divided by the number of double axles recorded at an adjacent counter.

The SCF is used to calculate the number of VEHICLES from a DOUBLE AXLE count.

### 4.3. Vehicle categories

Vehicles are classified into the twelve AUSTROADS Vehicle Classification categories as shown in Chart 1.

Table 5.2 data is shown as a percentage of each class of vehicle counted.

## 5. Glossary of terms

Term	Definition
AADT	Annual Average Daily Traffic - expressed as the number of vehicles per day.
ADJUSTED DATA	Where this flag appears in this report, the data has been adjusted to correct impacts on data collection such as equipment failure or construction traffic. The adjusted figures are extrapolated from a statistical analysis of data adjacent to, and in the same period for previous years.
ROAD CLOSURE	Where this flag appears in this report, it indicates that during the period of data collection, the road was affected by closure due to flooding or other reasons, and this should be considered when using the data.
ROAD RESTRICTION	Where this flag appears in this report, it indicates that during the period of data collection, the road was affected by restrictions to the type/size of traffic allowed to use the road. This should be considered when using the data.
ROAD CLOSURE & RESTRICTION	Where this flag appears in this report, it indicates that during the period of data collection, the road was affected by both closures and restrictions.
ADT	Average Daily Traffic - The average 24 hour volume over the period of the traffic count.
CALCULATED AADT	Annual Average Daily Traffic - Average 24 hour traffic volume established by a twelve month continuous count.
COVERAGE STATION	Traffic count station which operates for a short duration with or without time based internal records.
DOUBLE AXLES (D/A)	Road tube counters at count stations, count traffic in terms of Double Axles passing over the tubes.
DA - VEH	Indicates data in transition, previous data in double axles and current data in vehicles.
ESTIMATED AADT	AADT obtained by applying a seasonal factor to data collected over a short period of time.
MADT	The ADT for a calendar month.
PRIMARY STATION	Permanent traffic count station where traffic data is recorded at fixed time intervals and counted continuously for 12 months of the year.
SPECIAL STATION	Traffic count station where traffic data is recorded for a special or specific purpose over a short period of time. They are usually requested on a 'one off' basis.
VEHICLES (VEH)	Loop counters at traffic count stations count traffic in Vehicles passing over the loop.
