SECTION 1 - INTRODUCTION

Road Network Division of the Department of Infrastructure Planning and Environment is responsible for the provision of traffic statistics pertaining to roads managed by the Northern Territory Government.

Territory Asset Management Services is responsible under contract to the Department of Infrastructure Planning and Environment for data collection, analysis and the operational management of the Departments traffic data acquisition program.

This report was prepared by Territory Asset Management Services for Road Network Division and represents processed traffic data in the following formats:

- Annual Traffic Count Data 1994 to 2003
- Monthly Traffic Count Data January 2003 to December 2003
- Vehicle Classification at Rural Primary Stations

1.01 OBJECTIVES OF THE TRAFFIC COUNTING PROGRAMME

Traffic data is a vital part of the information required in the planning, design and operation of the urban and rural road systems. The information is used by the Department of Infrastructure Planning and Environment and other Northern Territory Government Departments, State Government Road Authorities and Commercial organisations.

The aim of the Department's traffic count programme is:

- a) To monitor annual trends in traffic, by different classes of vehicles on different types of road.
- b) To determine the amount of travel in the Territory and in each of the administrative regions of the Territory.
- c) To demonstrate from the data the variation in traffic flow throughout the year.
- d) To provide traffic flow on specific links of the major road network for project evaluation.
- e) To provide a comprehensive database of traffic information.

1.02 THE UTILISATION OF TRAFFIC COUNT INFORMATION

The Department of Infrastructure Planning and Environment utilises the traffic information for the following purposes:

1. Road financing and budgeting.
2. Classification of roads and road network planning.
3. Development of programmes for the construction and maintenance of roads.
4. Development of road design standards.
5. The measurement of the level of service provided by the road system.

SECTION 2 - SUMMARY

2.01 DATA COLLECTION

Data for the traffic count report has been collected from a variety of locations at urban and rural primary and coverage stations throughout the Northern Territory.

2.02 REPORTING OF COUNT STATION RESULTS

Primary count stations throughout the Northern Territory are reported in "vehicles" and coverage count stations are reported in "double axles" and "vehicles". The report is in a transition phase to report in vehicles.

2.03 COMPUTER ANALYSIS

Traffic data is analysed using the Road Information Management System (RIMS) and downloaded from Count Stations using "TRANSPAC" and Metrocount proprietary Traffic Analysis Software.

2.04 VEHICLE CLASSIFICATION DATA

Vehicle type classifiers divide the vehicles into the nationally accepted AUSTROAD94 standard.

In January 1994 the AUSTROADS classifications were updated and this revised standard is currently used through out this document.

SECTION 3 - TRAFFIC COUNTS

3.01 INTRODUCTION

The urban and rural traffic counting programme is monitored by a network of traffic stations in the four major urban centres (Darwin, Katherine, Tennant Creek & Alice Springs) and in all rural areas throughout the Northern Territory. Figures 1 to 4 show the locations of urban count stations and Figures 5 to 8 show the locations of Rural count stations in Darwin Katherine, Tennant Creek and Alice Springs.

The traffic counting stations are divided into two categories of PRIMARY and COVERAGE stations.

PRIMARY STATIONS (P): These traffic stations record traffic counts 24 hrs. per day (Urban at 15 minute or Rural at 60 minute intervals) on a continuous basis for 12 months of the year.

COVERAGE STATIONS (C): These stations record data for one month, or a fortnightly period usually at a 60 or 15 minute interval time base. Their purpose is to provide traffic counting coverage for sections of roads between primary stations.

Urban station numbers are prefixed by UD (Darwin Region), UK (Katherine Region), UT (Tennant Creek Region) and UA (Alice Springs Region). Rural station numbers are prefixed by RD (Darwin Region), RK (Katherine Region), RT (Tennant Creek Region) and RA (Alice Springs Region).

3.02 PRIMARY STATIONS

Table 1 contains Urban Primary station summaries.

Table 2 contains Rural Primary Station summaries.

In these tables the information is presented under the heading of Road Name, Station Location, Road Number, ADT Station, Direction, Units, Calculated AADT in vehicles per day for the past 10 years.

3.03 COVERAGE STATIONS

Table 3 contains Urban Coverage station summaries.

Table 4 contains Rural Coverage station summaries.

In these tables the information is presented under the heading of Road Name / Location, ADT Station, Related Primary Station, Direction, Unit, ADT and Month of Count and Estimated AADT in double axles for the year.

The estimated AADT for rural coverage stations are calculated from the ADT, by multiplying the monthly ADT by the seasonal factor for that month, for the related primary station.

Table 4A contains a summary of all coverage stations and the respective year when the traffic count was taken.

SECTION 4- VEHICLE CLASSIFICATION ON RURAL ROADS

4.01 INTRODUCTION

Classifiers are devices which are placed for a period of 10 to 14 days at each Rural Primary Station to determine the composition of the traffic counted.

4.02 STATION CALIBRATION FACTOR

The Station Calibration Factor (SCF) is derived from the vehicle classification data and is the ratio of the number of vehicles counted by the classifier, divided by the number of double axles recorded at an adjacent counter.

The SCF is used to calculate the number of vehicles from a "double axle" count.

4.03 VEHICLE CATEGORIES

Vehicles are classified into the following twelve AUSTROADS Vehicle Classification categories:

Table 5 contains the percentages of each class of vehicle counted and the Station Calibration Factor for rural primary stations on Major Roads.

In January 1994 the AUSTROADS classifications were updated and this revised standard is currently used through out this document.

AUSTRROADS Vehicle Classification System

Level 1	Level 2		Level 3	AUSTRROADS Classification			
Length (indicative)	Axles and Axle Groups		Vehicle Type	Class	Parameters	Typical Configuration	
Type	Axles	Groups	Typical Description	Class	Parameters	Typical Configuration	
Short up to 5.5m	LIGHT VEHICLES						
		1 or 2	Short Sedan, Wagon, 4WD, Utility, Light Van, Bicycle, Motorcycle, etc	1	$d(1) \leq 3.2m$ and axles = 2		
Medium 5.5m to 14.5m	3, 4 or 5	3	Short - Towing Trailer, Caravan, Boat, etc	2	groups = 3 $d(1) \geq 2.1m$, $d(1) \leq 3.2m$, $d(2) \geq 2.1m$ and axles = 3, 4 or 5		
	HEAVY VEHICLES						
		2	2	Two Axle Truck or Bus	3	$d(1) > 3.2m$ and axles = 2	
		3	2	Three Axle Truck or Bus	4	axles = 3 and groups = 2	
		> 3	2	Four Axle Truck	5	axles > 3 and groups = 2	
Long 11.5m to 19.0m	3	3	Three Axle Articulated Three axle articulated vehicle, or Rigid vehicle and trailer	6	$d(1) > 3.2m$, axles = 3 and groups = 3		
	4	> 2	Four Axle Articulated Four axle articulated vehicle, or Rigid vehicle and trailer	7	$d(2) < 2.1m$ or $d(1) < 2.1m$ or $d(1) > 3.2m$ axles = 4 and groups > 2		
	5	> 2	Five Axle Articulated Five axle articulated vehicle, or Rigid vehicle and trailer	8	$d(2) < 2.1m$ or $d(1) < 2.1m$ or $d(1) > 3.2m$ axles = 5 and groups > 2		
	≥ 6	> 2	Six Axle Articulated Six axle articulated vehicle, or Rigid vehicle and trailer	9	axles = 6 and groups > 2 or axles > 6 and groups = 3		
Medium Combination 17.5m to 36.5m	> 6	4	B Double B Double, or Heavy truck and trailer	10	groups = 4 and axles > 6		
	> 6	5 or 6	Double Road Train Double road train, or Medium articulated vehicle and one dog trailer (M.A.D.)	11	groups = 5 or 6 and axles > 6		
Large Combination Over 33.0m	> 6	> 6	Triple Road Train Triple road train, or Heavy truck and three trailers	12	groups > 6 and axles > 6		

Definitions:
 Group: Axle group, where adjacent axles are less than 2.1m apart
 Groups: Number of axle groups
 Axles: Number of axles (maximum axle spacing of 10.0m)

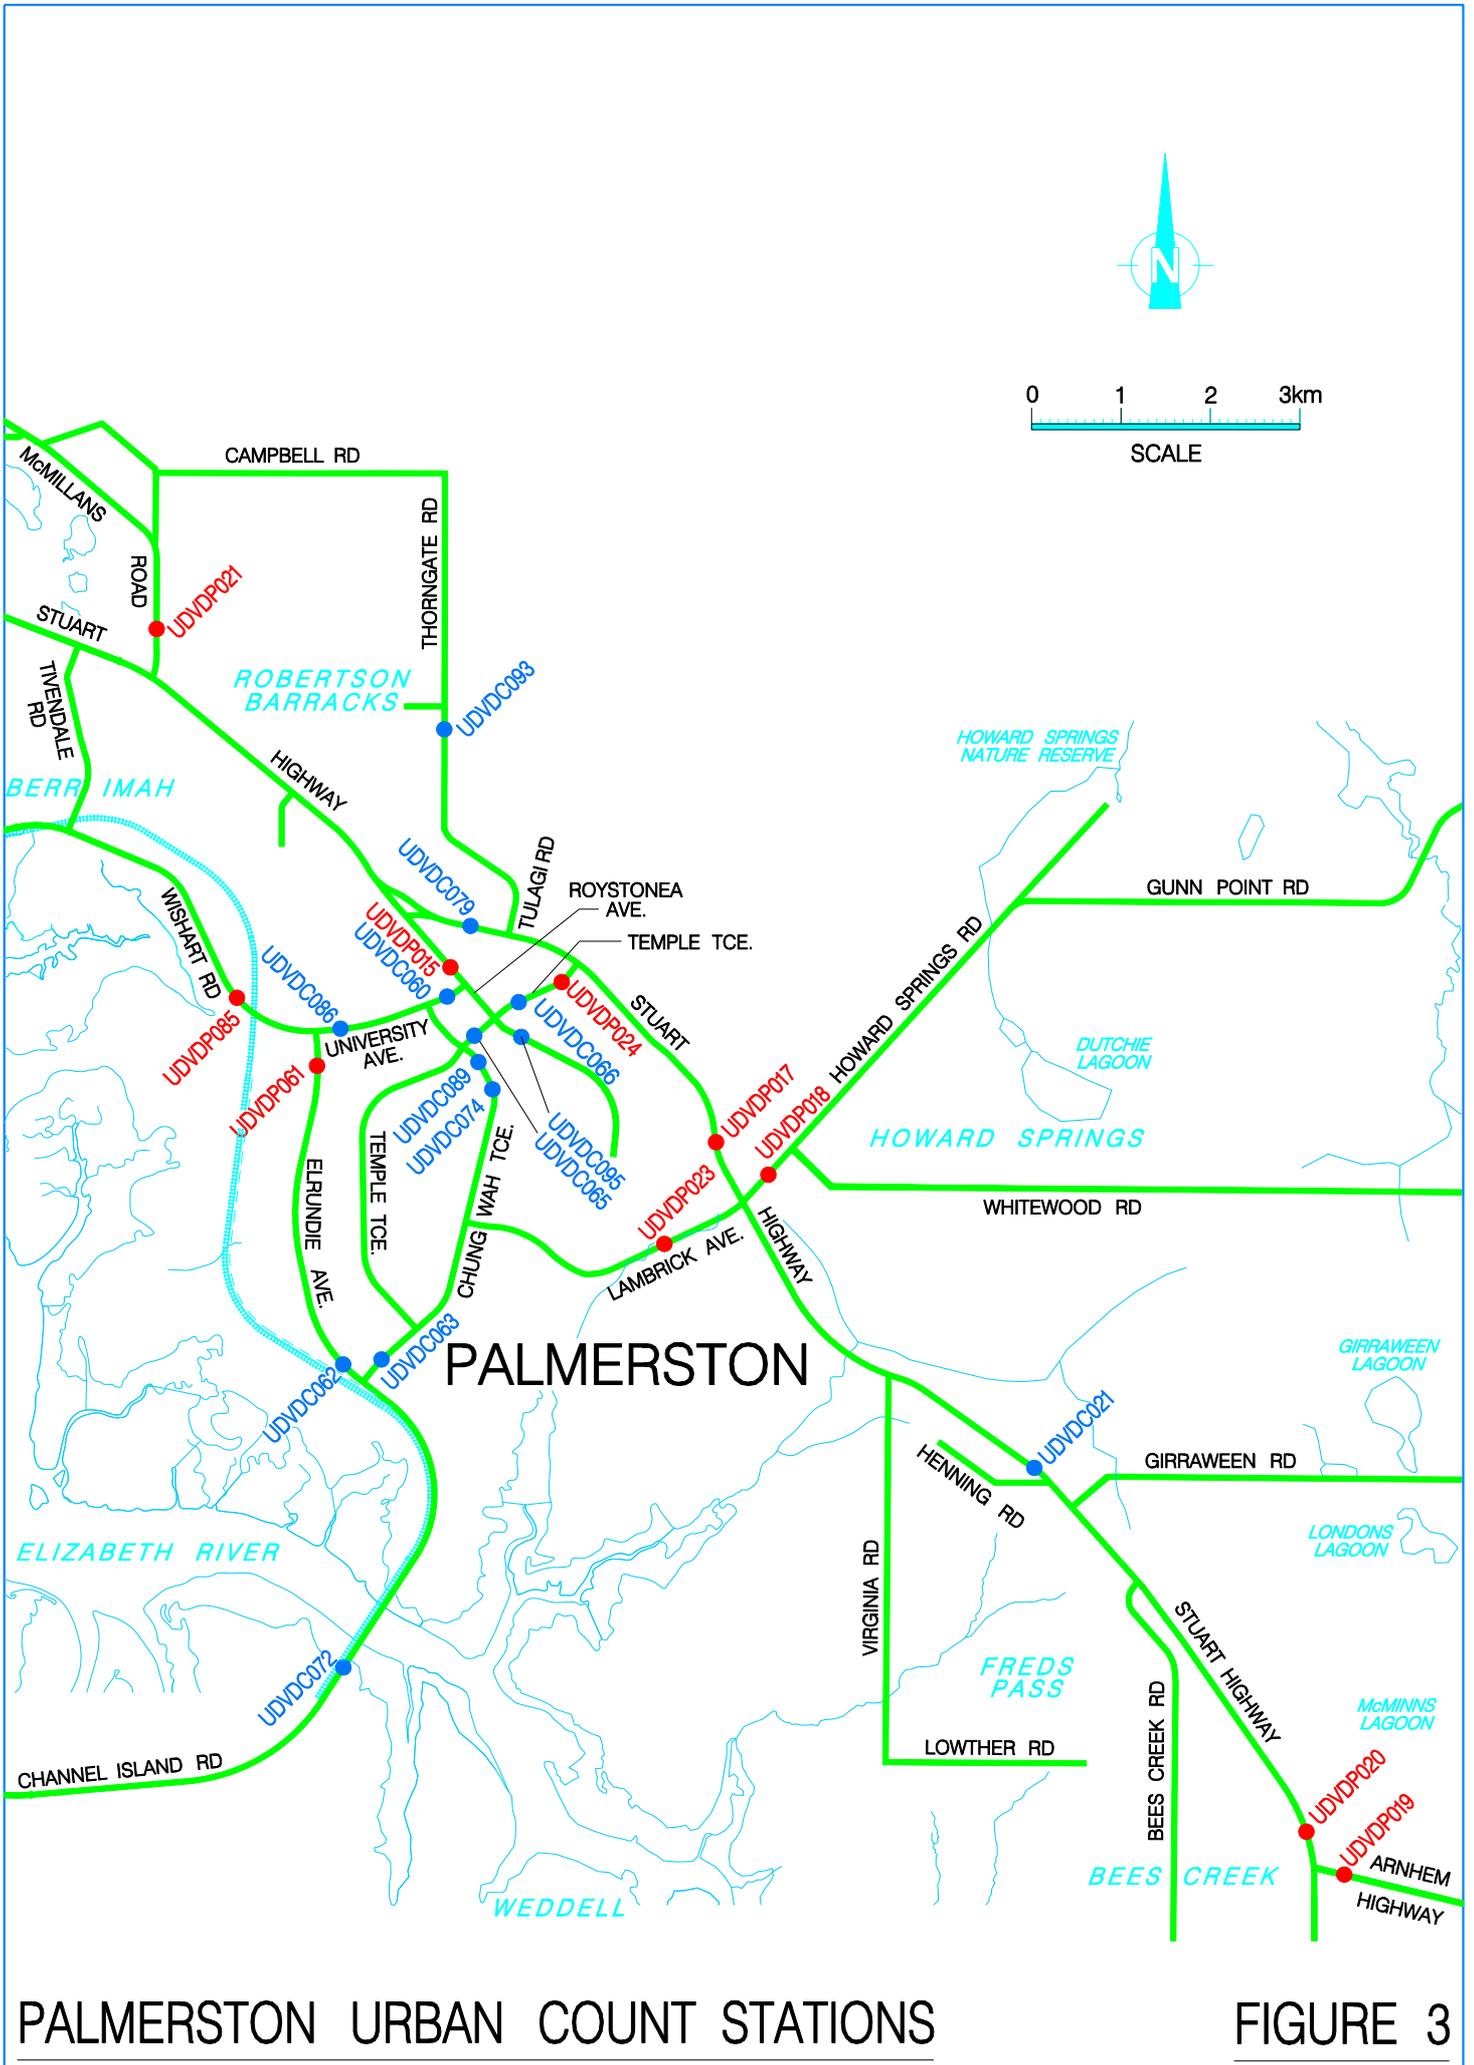

$d(1)$: Distance between first and second axle
 $d(2)$: Distance between second and third axle

SECTION 5

GLOSSARY OF TERMS

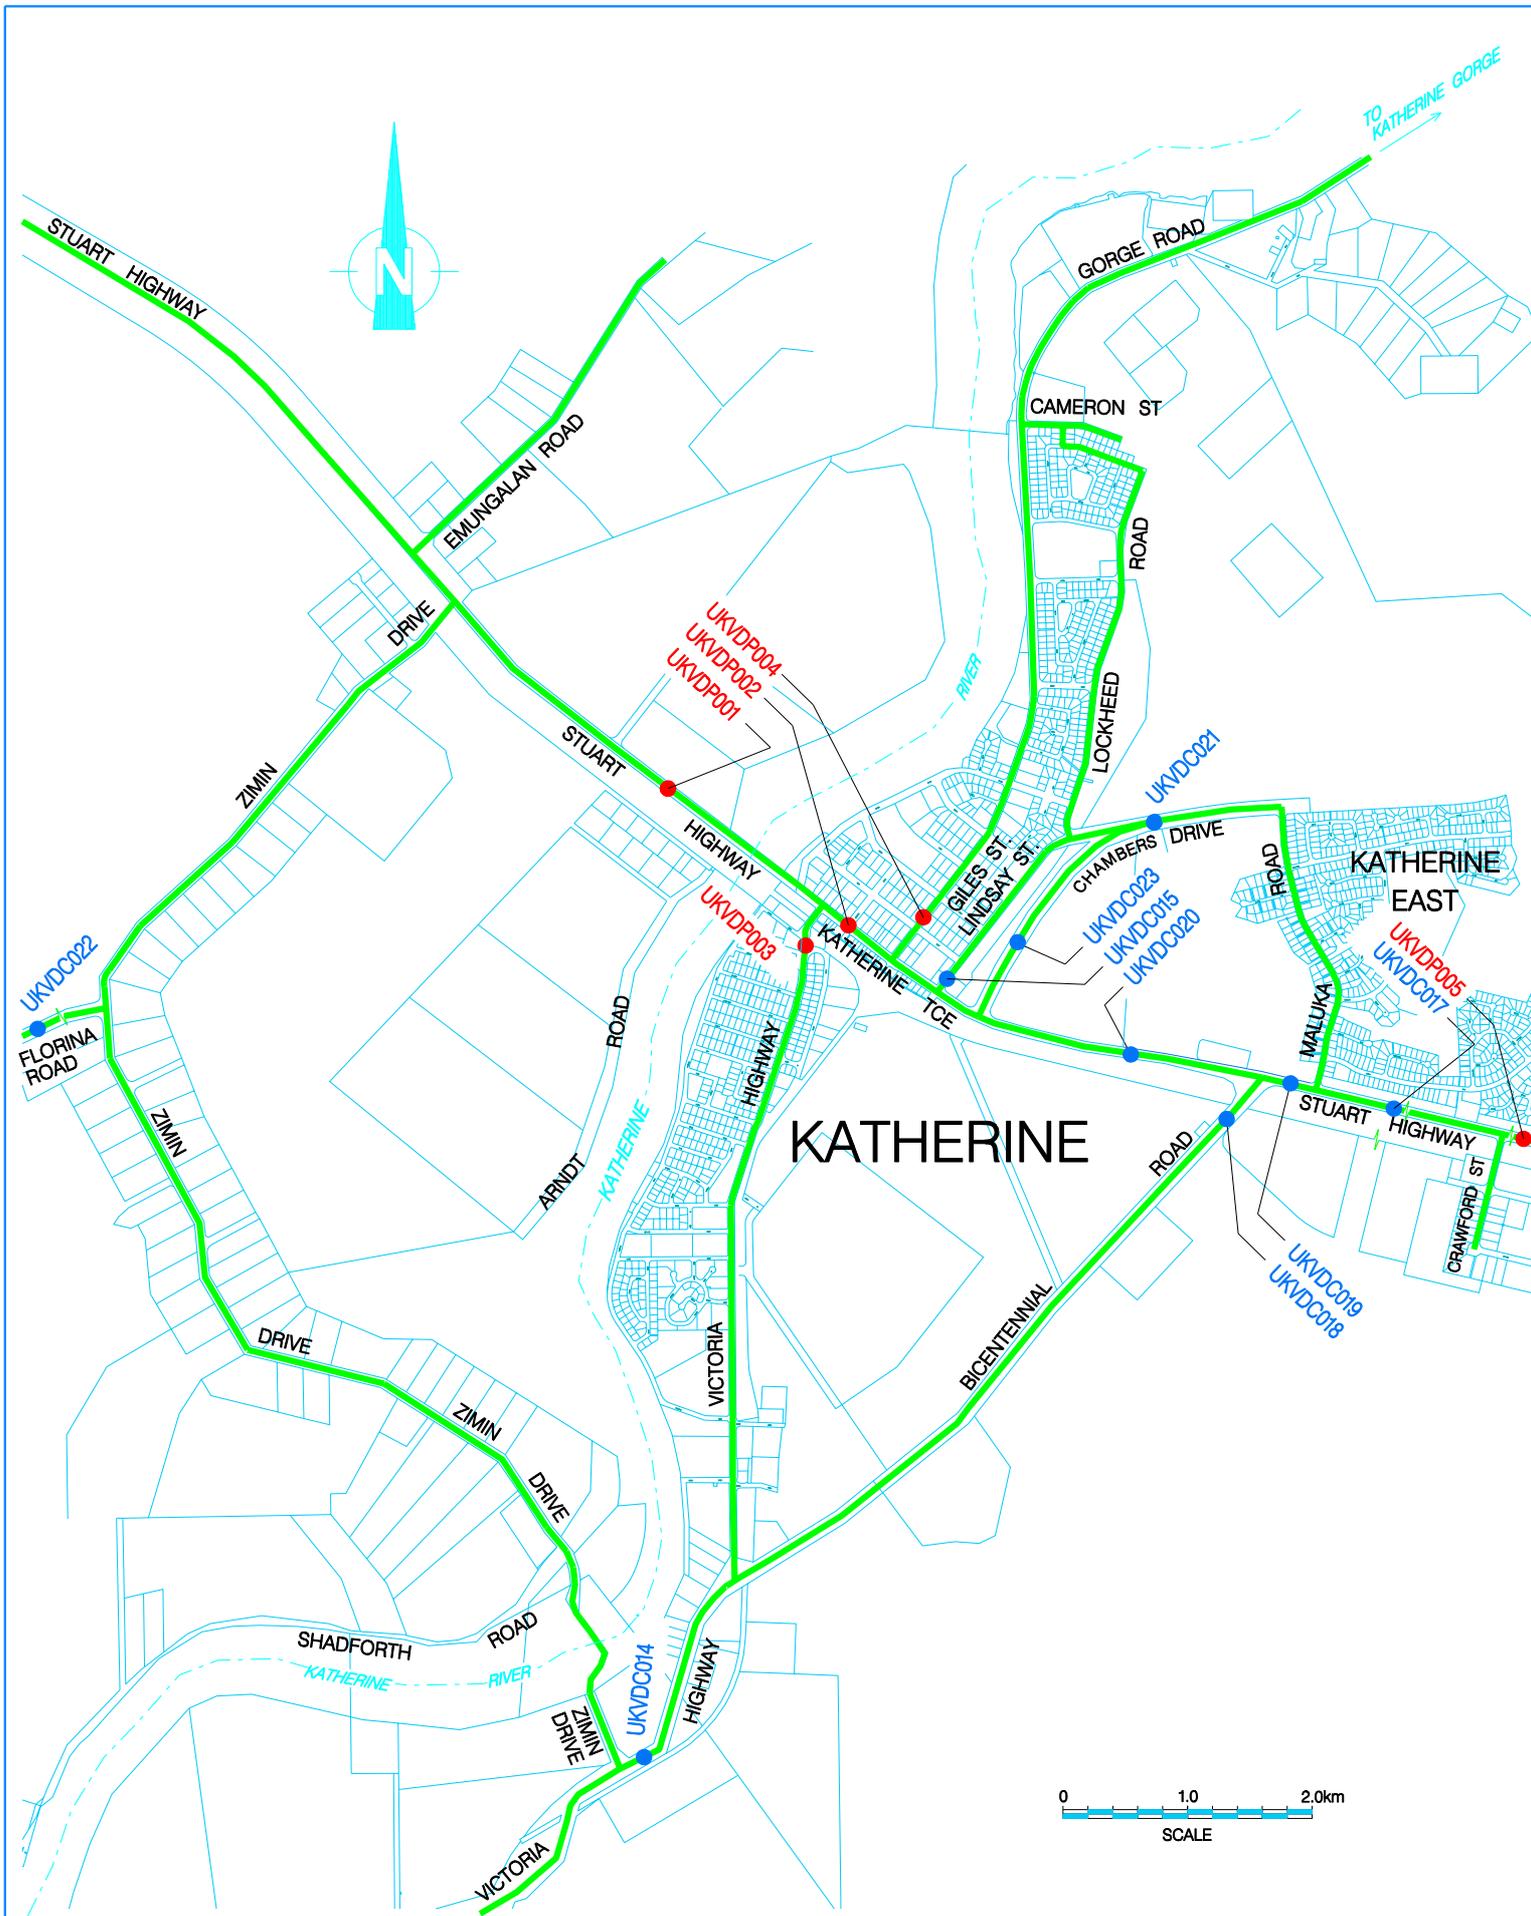

AADT	Annual Average Daily Traffic - expressed as a number of vehicles per day.
ADJUSTED AADT	AADT obtained by a statistical regression line based on available AADT data from previous years.
ADT	Average Daily Traffic - The average 24 hr volume over the period of the traffic count.
CALCULATED AADT	Annual Average Daily Traffic - Average 24 hr traffic volume established by a twelve month continuous count.
COVERAGE STATION	Traffic count station which operates for a short duration with or without time based internal records.
DOUBLE AXLES (D/A)	Road tube counters at count stations, count traffic in terms of Double Axles passing over the tubes.
DA – VEH	Indicates data in transition, previous data in double axles and current data in vehicles.
ESTIMATED AADT	AADT obtained by applying a seasonal factor to the ADT measured over a short period of time during the year.
PRIMARY STATION	Permanent traffic count station where traffic data is recorded at fixed time intervals and counted continuously for 12 months of the year.
SPECIAL STATION	Traffic count station where traffic data is recorded for a special or specific purpose over a short period of time. They are usually requested on a 'once off' basis.
VEHICLES (VEH)	Loop counters at traffic count stations count traffic in Vehicles passing over the counter.
